

Yellowquill School Information

Please be advised that Poulins will be visiting the PLPSD schools over the coming days to address the rodent population on school grounds. The company will be applying a product called – Gopher Doom. Gopher Doom is a rodenticide that has been applied in the PLPSD previously to control the gopher population. The Poulin product safety and handling information can be found at: http://pr-rp.hc-sc.gc.ca/1_1/view_label?p_ukid=83392768

The playgrounds will be treated by Poulins with a granular gopher bait likely over the weekend and that the product should not be ingested. Signage will be placed around the playgrounds, indicating that rodenticide has been applied down gopher holes in the school grounds. White and red warning flags will be placed around the sites to indicate - WARNING Pesticide Use (see attached). All gopher holes will receive an application of rodenticide therefore students will be advised to avoid touching or digging in the ground around gopher holes.

The PLPSD will be alerting the general public via [Portage Online](#) that the grounds will be treated with rodenticide which could potentially harm humans, dogs and cats if ingested. The announcement will alert the public that pets are forbidden to roam on PLPSD school grounds at all times.

Health Canada:

Product Name	POULIN'S GOPHER DOOM
Registration Number	22608
Active Ingredient	CHLOROPHACINONE
Product Type	RODENTICIDE
Registration Status	Registered
Status Expiry Date	31-DEC-19
